

SBC 2021 First Annual Member Awards Nomination

The Safer Buildings Coalition wishes to recognize outstanding member products and projects through a new juried evaluation.

About the Safe Inside Product and Project of the Year Awards Program

SBC's **Safe Inside Product of the Year** award recognizes new products in the in-building public safety communications market.

This program will provide SBC's audience with information about the top new product in their fields.

SBC's **Safe Inside Project of the Year** award recognizes outstanding projects in the in-building public safety communications market.

This program will spotlight projects for their impact, quality of workmanship, innovation, and contribution to reducing noise and interference.

2021 Program Schedule

- August 1: Entries open
- Sept 1: Entry deadline
- Sept 27th: Finalists announced @ SBC Member's Dinner
- October 25th: Winners notified
- Nov 10th: Winners Announced @ IWCE In-Building Forum

Rules:

1. Entries may be submitted by SBC Current Member Organizations only.
2. You may submit a Product, a Project, or both.
3. One entry per category per member organization.
4. Entries must be submitted on behalf of the original manufacturer or project system integrator, and not on behalf of another organization.
5. Entries will be screened for compliance to rules.
6. All entries that meet eligibility requirements are
7. All information requested must be provided. An incomplete form or a form providing misleading or false information will result in disqualification.
8. An authorized representative of the member organization must complete the entry form verifying all information.
9. SBC will convene a cross-functional panel of its choosing to judge the entries.
10. Entry Fee: Waived for 2021

Eligibility requirements

Products entered into the 2021 program must meet the following criteria:

1. Products must specifically pertain to the in-building public safety market.
 2. Products should demonstrate an innovation that furthers the mission of making buildings Safer Inside.
 3. Products must have been made first available for purchase in the North American market between August 1, 2020, and August 1, 2021.
 4. If the entry is a new version of a previously available product, the entry must represent a major modification or redesign of the product.
 5. New versions of software must offer new capabilities and significant enhancements.
 6. Products must be available for purchase in the United States.
- All information fields on the entry form are completed and accurate regarding the product and the manufacturer.

Projects entered into the 2021 program must meet the following criteria:

1. Projects must have been completed in the North American market between August 1, 2020, and August 1, 2021.
2. Projects must specifically pertain to the in-building public safety market.
3. Projects should demonstrate their impact, quality of workmanship, innovation, and contribution to reducing noise and interference.

How to Enter:

Use the form below to submit your entry(s).

Submitter Verification

- This information is necessary to ensure each Organization makes no more than one nomination per category

ECSite App for 5G

Date first available in the North American Market

Saturday, September 5, 2020

Product Description

Launched out of stealth in 2019, ECSite is a Software-as-a-Service (SaaS) business disrupting the telecom infrastructure industry through automation. The technology is a SaaS-based app that deploys automation software that streamlines telecom infrastructure testing and management, increasing efficiency for installers and network owners. ECSite is modernizing the infrastructure industry through software.

The ECSite Mobile App powers management and testing for all the Tier One wireless operators (in the U.S. and Canada), tower companies, neutral hosts, integrators, and services providers for network buildouts—from 4G upgrades to 5G small cells to professional sports stadiums to transportation centers. In 2020, ECSite extended the technology to enable testing and measurement of Public Safety Networks and Public Safety DAS.

Public Safety Networks are critical to ensuring safety during a natural disaster or emergency such as fires and floods. Having a working public safety network has the potential to save lives. And that's where ECSite comes in.

ECSite's technology deploys automation software that ensures telecom infrastructure testing and management is accurate and secure—it's precisely how a Public Safety Network needs to be measured and managed.

Please describe the innovative nature of this product

ECSite saw an opportunity to develop a fully integrated platform, on the cloud, to automate all elements of network testing, management, and closeout documentation that commonly result in human errors, site re-visits, and completion delays that impact bottom-line performance. This can't happen to a Public Safety Network. It must be well documented, accurate, and work in the most harrowing of emergencies. ECSite enables this.

ECSite's end-to-end software app accelerates these processes and produces closeout documentation with the click of a button, error-free. ECSite customers enjoy the reliability and the result of being "complete" and paid sooner. ECSite customers scale their revenue opportunities more efficiently while managing their overhead increases.

ECSite customers can have a precise and accurate Public Safety Network with all the documentation residing in the cloud.

In the wireless industry, every network operator and service provider knows how to build networks effectively. The practice of building a network is well-established. ECSite is a revolution of the wireless network builds, applying technology to make every network faster, accurate, efficient, and safe. ECSite's solution changes the practice of doing everything manually or automating a few pieces of the process. ECSite automates everything. There is no competition. ECSite is game-changing and leading the way for testing, measurement, and management of Public Safety Network builds.

Today, ECSite is the most innovative service in the test and measurement space for Public Safety Networks, and is well-deserving of the SBC 2021 First Annual Member Award for the SBC Safe Inside Product of the Year - Inaugural edition.
